# Multi-Channel Anemomaster

## MODEL 1580

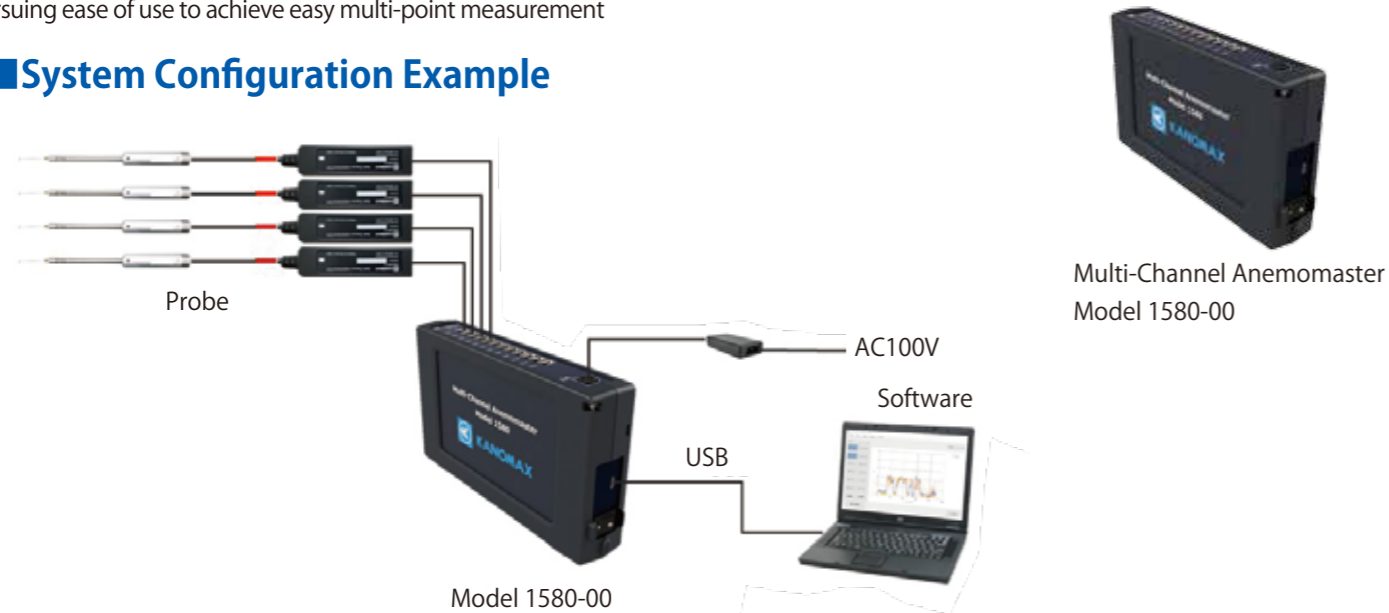

12-channel multi-Channel Anemomaster  
 Compact and light weight

- 15 types of compatible probes for various applications
- The smallest class probe in the industry
- High heat resistance enables precise measurement even in tough environments
- High portability of the main body makes it easy to use in vehicles.
- Improved probe response and accuracy, micro air velocity limit of 0.01 m/s

## Easy and simple configuration that can support up to 12 channels

World's highest level of accuracy and responsiveness in the full air velocity range, including the fine velocity range  
 Multi-channel measurement with up to 12 channels is realized with the industry's smallest level of miniature probes, high heat resistance and temperature measurement.  
 Pursuing ease of use to achieve easy multi-point measurement

### System Configuration Example

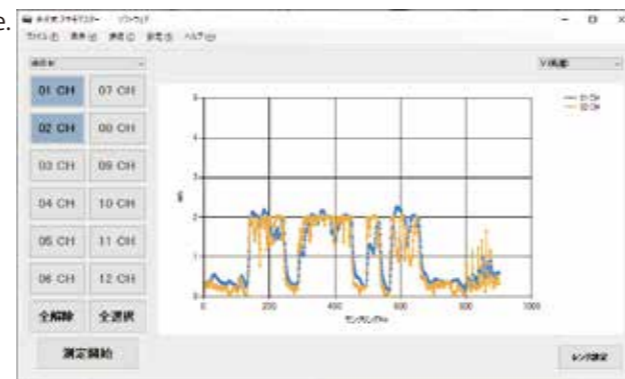

### Supports analog output

By connecting an optional analog unit, it is possible to convert the measurement data into an analog signal and output it. Each analog unit has 12 channels, and it is possible to select electric current or voltage for each channel. A maximum of 3 units can be added to 36 channels with one main unit, making it ideal for data collection using a data logger.

### Software

This product comes with a Windows version of the measurement software. Simultaneous measurement of all channels of air velocity, temperature and humidity, and real-time graph display. Measurement data is saved in text format and can be easily imported into table measurement software such as Excel. It can be measured from a PC via the USB communication interface.

### Application Example

Thermal management of the ECU

Evaluation of heat measures for the electronic infrastructure

Airflow management indoors for semiconductor manufacturing equipment

Data center thermal
